

Google Drive Uploader

Selected Integrations:  nq227  mike@automationninjas.com

Create an Upload Wizard

On: Request specific files, one at a time, and rename them as they're received.

Off: PlusThis will allow the configured number of files to be uploaded at the same time.

Users will be prompted to upload files in the order configured here.

What instruction do you want to include?

Step 1 - Please upload your Sequence 1 Emails

Allow all file types

Rename the file after upload

What should we name the file?

~Contact.FirstName~ ~Contact.LastN

Use merge fields to merge in contact details.

Merge Fields

Please select a field

~Contact.FirstName~ ~Contact.LastN

Use merge fields to merge in contact details.

Please select a field

Which tag should be applied when this file is uploaded?

PT Google Drive Upload

Add File Upload Step

Display this message when all files have been uploaded:

Thank you, file uploads complete. We have been notified of the upload

Additional Options

Store a link to the contact's Drive folder:

TEST - PT Google Drive Folder

This link is only accessible by users with permission to access the folder.

Off

Disable contact id verification

Allows you to use the uploader on platforms that don't expose contact id.
(For example, use with the Infusionsoft Landing Page Builder and ClickFunnels.)

File Upload Location

Files will be uploaded to the root directory of your Google Drive, to a folder called "PlusThis Uploads." This folder will contain a folder for each contact record that uploads a file, named <Last Name>, <First Name> <Contact Id>. For example:

- PlusThis Uploads
 - Smith, John 5479
 - File 1
 - File 2
 - ...

You may safely rename the files but **do not change the folder names.**
