# Date Calculator - What's the Date?

Selected Integrations:  wb398

Configure your calculations below. Pick a date to start from, and add calculations to run in order.

**Start with this date:**

The date when feature is used ▼

**Treat the start date as:**

(GMT-04:00) Eastern Time (US & Canada) ▼

**Choose type of calculation:** 

Add/subtract a static number of months/days/hours/minutes ▼

Use the options below to add or subtract a static number of days, months, hours, and/or minutes.

Add

0

months

5

days

0

hours

0

mins

Add a calculation

Store the resulting date

**Put the calculated date in this field:**

Countdown Date ▼

**Put the human-formatted date in this field:**

Do Not Save ▼

**Format the date like this:**

July 24, 2018 ▼

**Put the human-formatted time in this field:**

Do Not Save ▼

**Store result in this timezone:**

Leave blank to use the start timezone ▼

If there is already a date in the calculated field, then keep the existing date (don't update)

Store a count to the calculated date

**Put the count in this field:**

Do not store ▼

**Calculate the difference in:**

Months ▼

Allow a negative number result (will be negative if the calculated date is before the start date)

If there is already a count in this field, then keep the existing count (don't update)
